Summary

- 12+ years of experience in **Software Development, DevOps, SRE** and **team leadership**.
- Proficient in Designing, implementing, and managing cloud-native applications on multiple cloud platforms.
- Deep understanding of **DevOps pipelines**, and monitoring frameworks using Go, **Python**, **Kubernetes**, Docker, and various **observability** tools.
- Led projects focused on reliability, scalability, and security, including automating CI/CD processes, reducing manual work, and implementing **DevSecOps** practices.
- Experienced **Team Leader** with a strong background in team management and process improvement with strong organizational and leadership skills

Skills

- **Languages and Framework:** Python, Go, Shell, HTML, FAST, Gin, Django
- **DevOps Tools:** Docker, Containerd, Kubernetes, ArgoCD, Helm, GitHub, CircleCI, Sonar, Ansible, Terraform, Kafka, Vault, Jenkins, ServiceNow, MinIO
- **Cloud Platforms:** HPE GreenLake, Private/Hybrid Cloud, AWS, GCP, Azure
- **Databases:** SQL, MongoDB, DynamoDB
- **AI/ML:** LLM, AI-Agents, Co-Pilot, Langchain
- **Observability, Monitoring & Logging:** Open Telemetry, CloudWatch, CloudTrail, Prometheus, Kibana, Grafana.

Work Experience

Hewlett Packard Enterprise

Tech Lead / Cloud Engineer III (April 2023 - Present)

- Architected, developed, and deployed distributed microservices using **Python, FastAPI, Go**, integrating with enterprise platforms and external systems across **AWS, HPC clusters, and on-prem environments**.
- Integrated **Apache Kafka** into microservices architecture to enable real-time event streaming, asynchronous inter-service communication and high-throughput data processing.
- Containerized and orchestrated workloads using **Docker, Kubernetes (Amazon EKS & Bare-Metal)**, with automated deployment workflows via **Helm, ArgoCD, and GitOps**, improving release velocity and reliability.
- Automated infrastructure provisioning with **Terraform and Ansible**, integrating secure access management using **AWS IAM, S3, ECR**, and applying zero-trust and RBAC policies.
- Implemented CI/CD pipelines using **GitHub Actions, Jenkins, Terraform Cloud pipelines**, achieving a **50% reduction in manual deployment efforts** and accelerating delivery cycles.
- Built secure infrastructure automation using **Terraform, Ansible, AWS IAM, S3, ECR**, and implemented **zero-trust configurations and fine-grained RBAC** across environments.
- Designed observability and monitoring architectures leveraging **OpenTelemetry, Prometheus, Grafana, PowerBI, Elastic Stack**, authoring **PromQL queries and SLA/SLO/SLI dashboards** for real-time operational insight.

- Migrated SaaS-based observability stack to a fully **on-prem, FIPS-compliant model** for U.S. Federal environments, improving compliance posture and data sovereignty
- Executed hands-on SRE responsibilities by automating reliability workflows, enhancing on-call operations, driving RCA processes, and tuning infrastructure using observability, tracing, and performance analytics
- Strengthened application and pipeline security using **SonarQube, SBOM validation, dependency scanning, and FIPS-validated CI checks**, reducing vulnerability exposure by **~30%**.
- Built intelligent automation tooling with **Python, Golang, REST, and wrapper APIs**, improving operational maturity in deployments, monitoring pipelines, and alerting systems.
- Led a cross-functional team of five engineers, driving backlog planning, sprint execution, performance reviews, knowledge mentoring, and production incident management with structured postmortems.
- Built AI-driven security platform using **Ollama, LangChain**, and **RAG** for autonomous vulnerability scanning and security compliance; prototyped on GCP **BigQuery** with **Vertex AI** and **Gemini**

Sr. System / Sr. DevOps Engineer (Feb 2020 – March 2023)

- Planned and executed **Edge** projects, handled reliability and scalability.
- Led Edge project execution with focus on **reliability, scalability**, and CI/CD automation using GitHub Actions, reducing 30% manual effort.
- Built observability and monitoring pipelines using **ELK**, alongside automated alerting for infrastructure and AWS components (IAM, S3, ECR)
- Developed deployment and monitoring automation using Python, Golang, and Python wrapper APIs with supporting unit tests.
-
- Automated provisioning and configuration management using Terraform and Ansible to streamline infrastructure operations.

HCL Tech (Dell-EMC)

Tech-Lead (Jan 2019 - Jan 2020)

- Developed monitoring tools using Python, Bash, REST APIs, Django, Perl, and MySQL while managing production escalations and incident response within defined SLAs.
- Led and mentored junior engineers, ensuring delivery quality and technical guidance throughout the project lifecycle.

Dell-EMC

Software Engineer II (Feb 2013 -Jan 2019)

- Developed and maintained applications using Python, Django, REST APIs, Linux automation, MySQL, Perl, Shell scripting, and implemented QA testing, debugging, and automation via Jenkins and Docker.
- Worked on product sustenance using JavaScript and MongoDB while designing, deploying, and managing datacenter and storage solutions (EMC, NetApp).
- Evaluated client requirements, proposed solutions, and performed storage migrations, upgrades, replication, and end-to-end infrastructure support.

Education

- **MS (2015-2017) Software Engineering- Birla Institute of Technology and Science**
GPA: 7.5/10
- **B.E. (2008-2012) - Electronics- Rajiv Gandhi Technical University**
GPA: 7.8/10
